What Is AutoCAD? AutoCAD is a tool used for creating, editing, and printing 2D and 3D drawings. AutoCAD is currently one of the most popular computer-aided design (CAD) software in the world. In 1990, the company said that about 1,500 software titles had been created using AutoCAD, including software for commercial and home use. From a design perspective, AutoCAD and AutoCAD LT are designed for the most demanding users. However, the newest version of AutoCAD, AutoCAD 2010, is optimized for smaller and mid-sized businesses. It can also be used as a standard graphics tool for consumers and medium-sized businesses. AutoCAD LT is specifically designed for small- to medium-sized businesses that need the flexibility to do their own designs. Although both AutoCAD and AutoCAD LT can be used on a Windows, Macintosh, and Linux platform, only AutoCAD LT can be used in any office equipped with LaserJet or Inkjet printers. Overview AutoCAD has 3 main components: the AutoCAD program, which is the CAD application, and AutoCAD LT, a lightweight version of AutoCAD for smaller businesses. AutoCAD LT and AutoCAD 2010 are the latest versions of AutoCAD. These versions are optimised for smaller and mid-sized businesses. They can also be used as standard graphics tools for consumers and medium-sized businesses. AutoCAD is a complete application for creating, editing, and printing 2D and 3D drawings. It is the world's most widely used CAD (computer-aided design) software application for 2D drafting and design. AutoCAD is developed and marketed by Autodesk, a software company based in San Rafael, California. One of the advantages of the new version of AutoCAD, AutoCAD 2010, is that it can be run as a network application, allowing users to connect through a wireless or a wired network. You can also synchronise content from any computer in your office or home to a shared network drive, enabling the entire group to have access to the same drawings at the same time. AutoCAD is designed to make life easier for architects, engineers, and technicians who need to create, modify, and print accurate 2D and 3D designs. The program can be used in design offices, on personal computers,

Pages Tuesday, February 26, 2015 11 days till I go back on a plane (well, the second plane of the day but it's not like I can't go home from Vancouver) and I will have not had a real coffee until I'm back in Norway. I can't believe it. It's like I've been living on espresso! Fortunately, I have my little food cart which has been on the road with me (though mostly in my van) and on Monday I will be making my way to a super tiny town called Baker Creek in northern BC where I will open up in my secret location: a mini mall. The whole place is about ten times the size of my apartment in Sydney (which is one of the smallest by area in the world) and about thirty times the size of my sweet little cart back home. (By the way, I love you, Vancouver). I'll be selling baked goodies, some of my favourite drinks and I hope to give a little education about the coffee industry on the side. This isn't something I intend to get super into but I am keeping my eyes and ears open and maybe eventually I'll be able to speak intelligently about coffee. I would love to start a conversation with someone about what they love in a coffee and what they don't like and why they love it or don't love it. I love coffee and I feel like there is so much I could talk about in my little world. I love my
