Privacy Tunnel is an easy-to-use and reliable Private Internet Protocol (PIP) VPN client for Windows. With a simple and easy-to-use interface, it provides you with a range of features that will enhance your online privacy and increase your Internet security. Privacy Tunnel has several unique features that make it different from other VPN programs. It comes in a small package and offers a free trial period. During the trial, you will be able to use most of the functions in the application. When the trial period is over, however, you can continue to use the software for a monthly fee. Privacy Tunnel comes with an optional subscription service that allows you to pay a fee to enjoy more features in the software. There are five subscription levels ranging from a free plan to the Platinum plan, which costs \$99.95 per month. The free plan is not limited to the number of days that you can use the service. It is ad-supported and includes limited features, but you can have your computer for up to

What's New in the PrivateTunnel?

The PrivateTunnel Application is a reliable and useful VPN solution worth having when you need to secure your data while connecting to untrusted Internet connections, protect your system or mobile device against malware and malicious attacks and access blocked sites or limited services such as Hulu, BBC iPlayer or Skype. As its name states, the application aims to encrypt and protect your Internet traffic by creating a private tunnel with strong authentication between your machine and a trusted provider. Speaking about cyber attacks, identity theft, malware and spyware, you need to be conscious that you are always vulnerable when you go online. We are not talking about the anonymous person in the cafe-bar located next to your office who uses

an open Wi-Fi hotspot and waits for you to connect so he can steal your data. We refer to hackers who are targeting legitimate web sites to alter the code and inject malicious scripts on their site. Therefore, just because you are visiting a legitimate web site does not mean that you are safe. The major concern among users is their personal privacy when they connect to the Internet. Revealing your public IP address is like posting your home address or all your activities on a public web site. However, when PrivateTunnel is enabled, you can hide your public IP address and shield your network against hacker attacks. After creating an account, you can access the application by adding your credentials in the main interface. Although it comes with predefined websites that can be accessed through a secure VPN tunnel, such as Yahoo, Google, Twitter or Amazon, you can also add your owns. Also, you are able to monitor the Internet traffic and generate reports to view detailed information about Internet usage. Another reason that makes the application to stand out is the accessibility to any web

content. Imagine that you have recently moved to another country or simply have to travel a lot because of your work and need to access for example, BBC iPlayer; now it is the time when you find out that you are not allowed because of the imposed policies that many countries have.

PrivateTunnel supports advanced methods to remove such restrictions no matter where you live or travel. On an ending note, PrivateTunnel comes in handy when you need to secure your data and protect against hackers and cyber criminals no matter the Internet connection you use. PrivateTunnel Premium is the extended version of the PrivateTunnel app. It is an enhanced version of the app that features several features, such as VPN server backups, the ability to automatically log into websites, advanced DNS settings and more. The full list of features:

- Full Hotspot mode - This mode allows you to create a full secure connection with an encrypted VPN connection
- Fully secured - PrivateTunnel offers a perfect way to securely log into your favorite websites, the content is uploaded through a SSL tunnel

-
- Automatic login - You can automatically log
